PROFESSIONAL SUMMARY

Frontend-focused full-stack engineer with 6+ years delivering enterprise web applications in regulated banking and high-traffic consumer platforms, currently serving as the acting frontend lead on a Singapore banking client engagement. Deep expertise in React, TypeScript, and modern tooling, with production experience in Java Spring Boot microservices on creating REST endpoints and addressing security vulnerabilities. Track record of leading legacy modernization at scale, defining frontend architecture standards, mentoring engineering teams of 6+ from different nationalities, and owning release governance for production banking systems.

TECHNICAL SKILLS

Frontend: React, TypeScript, Next.js, Redux, Vue 3, Nuxt, SvelteKit, MUI, Tailwind CSS, SCSS, Webpack, Vite

Backend: Java 11 / Spring Boot, Node.js, Express, PHP 8 / Laravel, REST, GraphQL

Quality & Testing: Jest, React Testing Library, JUnit, SonarQube

DevOps & Cloud: Jenkins, Docker, AWS, Cloudflare Pages, Bash, Artifactory, Kibana, Nginx

Databases & Tools: MySQL, PostgreSQL, MariaDB, MongoDB, Git, Bitbucket, Confluence, JIRA, AEM, TeamSite

PROFESSIONAL EXPERIENCE

Accenture Technology Centre Malaysia — Application Development Senior Analyst Dec 2022 – Present

Frontend lead (acting) on a Singapore banking client; two concurrent project streams (Onboarding and Transactions)

Technical Leadership & Architecture

- Serve as frontend technical lead for **a banking project**, defining architecture standards for state management boundaries and separation of UI, business logic, and API layers — enabling incremental modernization without disrupting delivery.
- Proposed an alternative system architecture for a marketing analytics platform to the VP and solution architect; design was adopted, **de-risking delivery** through proactive technical mitigation.
- Stabilized a critical project during team attrition by onboarding a new squad lead, senior PM, and **10 engineers**; delivered structured knowledge transfer across domain, architecture, and workflows to restore delivery continuity.
- Mentored **6 frontend developers** on architecture, testing, domain knowledge and code quality; reviewed **15+ pull requests monthly** with focus on structure, scalability, and maintainability.
- Won **2023 Innovation Champion** for driving banking process improvements through technical innovation.

Frontend Engineering & Modernization

- Led modernization of a legacy React application serving **30K+ users**: upgraded core libraries, removed duplicate logic, and introduced a unit-testing framework — achieving **75% faster builds** and **~50% code reduction**.
- Built **10+ reusable UI components** with dynamic labelling and strict schema validation (React, Tailwind, React Hook Form, Redux), improving maintainability and UX consistency across 8+ pages.
- Raised automated test coverage to **~90%** with 80+ Jest/RTL tests, reducing technical debt by 40%; used AI-assisted tooling to generate 70+ unit tests and refactor legacy code.
- Maintained Webpack configurations across **5 repositories**, integrating builds into CI/CD pipelines and reducing minified bundle size.

Backend Engineering & Modernization

- Owned end-to-end delivery of **3 Spring Boot microservices** with 30+ JUnit tests, vulnerability remediation, and secure coding practices for banking compliance.
- Designed **3 REST endpoints** using Spring Integration and Spring Boot with Spring Security for Authorization using Bearer token and Session for an application serving Singapore market
- Achieved 30+ JUnit test cases across the 3 microservices, targeting 0 code smell and 0 major vulnerability with secure coding practices as part of banking compliance requirements based on Veracode.

Release Reliability

- Maintained SIT environments (Apache, JBoss, Jenkins); implemented contingency and recovery procedures to ensure service continuity.
- Managed build and dependency lifecycle with Maven and Gradle across the microservices, integrated into Jenkins CI/CD pipelines for automated build, test, and deployment
- Worked on migraton of 3 Spring Boot microservices from Java 8 to Java 11 with transition from Maven to Gradle, resulting to 30% faster build time and 20%
- Built and maintained data access layers using Hibernate against Oracle DB for tracking customer journey
- Owned release governance for **3 production releases** and coordinated zero-downtime deployments across **6 banking applications** with L3 support and PMO.
- Integrated TeamSite CMS with Spring Boot services to let product owners self-manage localisation and legal content; implemented AEM behavioural analytics across 3 websites.

Photobook Worldwide — Web Developer

Aug 2019 – Dec 2022

High-traffic global e-commerce platform for personalised print products

- Maintained and extended a React consumer application (MUI, SCSS), delivering improvements across SEO metadata, payment integration flows, and product preview components.
- Resolved critical production incidents via Laravel hotfixes and root-cause log analysis in Kibana; maintained back-office systems across PHP/Laravel, SQL, and REST/GraphQL.
- Containerised the Laravel back office and React frontend with Docker for consistent production deployment and faster local setup; built cloud-native features on AWS with DevOps and DBA teams.

Freelance Frontend Developer (part-time, contract)

Aug 2023 – Present

- Built an AMP-ready news platform (React, Next.js, Zustand, Tailwind, TypeScript) optimised for SEO and mobile performance.
- Developed a consignment tracking system for an Indonesian logistics company (Vue 3, Nuxt, Pinia, Vite); deployed via Cloudflare with CircleCI CI/CD. Containerised QwikJS and Nuxt apps for AWS/Kubernetes deployment.
- Leading migration of a hyper-localised game marketplace from Vue to Svelte, directing two remote developers (one senior, one junior) through code review and task delegation; achieved a 100 Google Lighthouse score.

SELECTED PROJECTS

Alps Finance — Founding Engineer

Mar 2022 – Jan 2023

Independent Web3 project — DeFi asset transfer and on-chain social platform

- Led architecture and frontend build of a digital asset transfer feature integrating AAVE and Jumper Exchange protocols (React, Next.js, TypeScript, GraphQL, IPFS, EVM clients, MUI).
- Directed a small distributed dev team across three repositories on UX design, code review, and delivery planning; integrated Lens Protocol for on-chain social features with data stored on Polygon.

EDUCATION

BSc (Hons) Computer Science (Data Analytics) — Staffordshire University, UK

2016 – 2019

Awarded via Asia Pacific University, Malaysia

Second Class Honours, First Division • Sydney Accord-accredited

Associate of Art — Portland Community College, USA

2012 – 2015

Dean's List

CERTIFICATION

Google Cloud Digital Leader Certification (Feb 2025)

Reinvention with Agentic AI (April 2026)

LANGUAGES

English (fluent) • Indonesian (native) • Malay (advanced) • Mandarin Chinese (conversational)
